

# IP, IT & the Technology Turn

Technological advances can change our lives for the better. But how should the law encourage the development of those advances, and how should it regulate the products of knowledge? How can those products be used to further justice? Across the spectrum of intellectual property specialties, both local and global, in theory and in practice, the Chicago-Kent faculty boasts a team of scholars who are advancing our understanding of how intellectual property law and the use of technology can help harness the great potential of the information society.
